Have you ever imagined waking up and seeing the world clearly from the moment you open your eyes? Have you ever thought that you could have clear, natural vision again?

Being free of glasses or contacts will give you the freedom to enjoy life more, improving the way you look and feel about yourself, and opening up exciting new possibilities. Laser vision correction can make it happen. EyeSTAR LASIK Institute is your best choice for this important, life changing-treatment.

EyeSTAR LASIK Institute has been helping people from all corners of the world change their life by freeing them of their glasses and contact lenses since the 1990s. Wherever you are in the world, clear vision is within your reach.

EyeSTAR is the **first and only** Institute...

- ...to specialize in eye laser surgery in Turkey
- ...to have over 90% of patients come from all over the world
- ...to accept a limited number of patients (10 per day)
- ...to offer VIP eye laser surgery

EyeSTAR LASIK is an exceptionally safe and comfortable treatment method developed in EyeSTAR.

EyeSTAR LASIK is a combination of superior technology with the most highly experienced surgeons in a state-of-the-art operating environment, with an exceptionally caring and multilingual, first class patient service. EyeSTAR patients are automatically enrolled in the EyeSTAR Vision Plan, covering their vision for life.

After you read this brochure, we encourage you to visit our website or call us with your questions.

EyeSTAR LASIK

EyeSTAR LASIK: The Technology

One of the most reputed aspects of EyeSTAR LASIK treatment is the technology. EyeSTAR LASIK Institute is equipped with the latest FDA and clinically approved laser and diagnostic technology.

In order to provide the safest and most precise results, EyeSTAR is equipped with sophisticated diagnostic equipment for the most accurate assessment of the eye's visual defects. Assessment methods include corneal tomography, ultra-precise corneal topography (measuring the cornea at 22,000 points), corneal wavefront, and diagnosis and classification of corneal shape abnormalities with an artificial intelligence system.

Our laser, the Wavelight Allegretto Wave Eye-Q 400Hz, is the newest, fastest, and most advanced FDA-approved eye laser platform on the market. It is reputed for the most precise outcomes, and the highest level of safety and patient comfort.

We offer advanced CLB microkeratome technology or an all-laser EyeSTAR LASIK, depending on our surgeons' recommendations for each particular patient.

EyeSTAR LASIK: The Laser

Safety

The health of your eyes is critical and their safety a fundamental requirement. Therefore, EyeSTAR LASIK Institute has been using the Wavelight Allegretto Wave Eye-Q laser, which has a unique safety feature: PerfectPulse Technology™. This sophisticated technology ensures that the entire treatment and each pulse of the laser beam are completely controlled with ultra-fast eye tracking that follows eye movements 400 times per second, and adjusts the laser beam accordingly in less than six milliseconds. So, even when your eye moves, the treatment remains perfectly centered. It also prevents thermal effects on the eye and dryness, improving the healing process.

Quality of Vision

The Eye-Q laser also offers Wavefront Optimized technology, which has been shown to preserve the natural shape of the cornea and prevent the induction of optical errors that could lead to night vision problems or loss of contrast sensitivity (the ability to see the images crisply). The system has the potential to provide a majority of patients with better than 20/20 vision, which has been coined "eagle vision," since eagles have the innate ability to see better than 20/20 both day and night.

Performance

The Eye-Q system has a frequency of 400 pulses per second and the actual treatment time lasts only a few seconds as compared to often longer procedures. An average treatment will take no more than 10-12 seconds or about the times it takes to pour a cup of coffee. Shorter eye laser treatments have been shown to reduce healing time while decreasing the risk of post-operative infections, over-corrections and under-corrections.

EyeSTAR LASIK: The Surgeons

EyeSTAR LASIK's reputation also stems from our surgeons' experience and involvement: the best surgeons in the field, who will be personally involved in every step of your procedure.

EyeSTAR physicians are some of the most experienced and skilled LASIK surgeons, who have experience dating back to excimer laser serial #001, the first commercially available laser. Unlike other surgeons who perform various types of surgery, our surgeons perform only eye laser refractive procedures. All of our surgeons and medical staff have work experience and/or have completed residencies abroad, in the best universities and medical centers. Many of our surgeons have received refractive surgery fellowships at leading hospitals and medical schools.

Finally, the success of EyeSTAR LASIK's results is dependent on our surgeons' involvement in every step of the EyeSTAR LASIK procedure, under the supervision of our medical director. From answering all of your questions, to your suitability examination, to the actual treatment, to the post-treatment examination, rest assured that an experienced ophthalmologist will be taking care of you. No assistants, no opticians.

EyeSTAR LASIK Institute was designed with the goal of providing optimal patient comfort and safety. The diagnostic facilities resemble a coffee shop, complete with a complimentary refreshment lounge and wireless internet service.

The operating room features secure a fully sterile environment. These include, Hepa filters, a UV air sterilization system, a multiple air-conditioning system, and a real-time air quality monitoring system. Also, EyeSTAR's one-of-a-kind loop system optimizes patient comfort and facilitates sterile conditions.

Other features of our facilities include:

- a massage prior to your treatment
- listening to your preferred music during your treatment (from your CD/DVD or MP3)
- a transparent operating room and laser floor plasma panel, giving your friends and relatives the option to watch your treatment

EyeSTAR LASIK: The Facilities

EyeSTAR LASIK: The Trip

- Please schedule your appointment with us as soon as you know your travel dates. Remember that we accept no more than 10 patients per day to give our patients' eyes the best care.
- Decide how you would like to handle your transportation and accommodations in Istanbul. We will be happy to reserve your hotel accommodations at one of our partner hotels and provide you airport and clinic transfers in one of our luxury vehicles.
- If you wear soft contact lenses be sure to remove them at least 1 week prior to your appointment. Hard contacts should be removed 3 weeks prior.
- Don't be too surprised to hear "LASIK in Istanbul? Are you crazy?!" from your friends and family. After all, even though **EyeSTAR LASIK** is a superior eye laser treatment method, our greatest disadvantage is that we are in Turkey. However, this is a financial advantage for our patients, and that's why tens of thousands have come to EyeSTAR, and just keep on coming! Because with our American management, foreign-born staff, Europe and US-trained doctors, and our German, Japanese, and American technology, the only thing Turkish about us is the land we stand on and the coffee we serve!
